14. Java / Spring Boot Integration

---

1. Overview

JikoXpress uses a thermal printer (MHT-P80A, 80mm, USB/LAN) for all customer and kitchen print operations. The printer speaks **ESC/POS** — a byte-level command language. No special driver is needed on Linux; CUPS handles the connection and raw bytes are sent directly to the printer.

Printer specs:

- Model: MHT-P80A
- Interface: USB (primary), LAN (future/Ethernet)
- Paper width: 80mm
- Characters per line: 48 (normal font)
- CUPS printer name: `MHT-P80H-Printer`

Document Types

#	Document	Printed	Digital	Channel	Recipient
1	Receipt	☐	☐	Dine In, Pickup	Customer
2	Kitchen Receipt	☐	☐	Delivery — inside package	Customer
3	Full Payment Receipt	☐	☐	Delivery — WhatsApp/SMS	Customer
4	Customer Bill	☐	☐	Dine In	Customer
5	Kitchen Ticket — Dine In	☐	☐	Dine In	Chef
6	Kitchen Ticket — Pack	☐	☐	Pickup, Delivery	Chef
7	Order / Round Cancelled	☐	☐	All	Chef
8	Payment Slip	☐	☐	Kiosk cash	Customer

Border Style Quick Reference

Border	Document
`==========`	Dine In tickets
`**********`	Pack tickets
`=` top/bottom + `- - -` middle	Cancellations
`. . . . . .`	Payment Slip

---

2. ESC/POS Quick Reference

ESC Code	Meaning
`\x1b\x40`	Initialize printer (reset all settings)

ESC Code	Meaning
`\x1b\x61\x00`	Align LEFT
`\x1b\x61\x01`	Align CENTER
`\x1b\x61\x02`	Align RIGHT
`\x1b\x45\x01`	Bold ON
`\x1b\x45\x00`	Bold OFF
`\x1b\x21\x00`	Normal font size
`\x1b\x21\x10`	Double height font (medium)
`\x1b\x21\x30`	Double width + height font (large)
`\x0a`	Line feed (new line)
`\x1d\x56\x00`	Full paper cut
`\x1d\x68\x40`	Barcode height — 64 dots
`\x1d\x77\x02`	Barcode width multiplier — x2
`\x1d\x6b\x04 ... \x00`	Print CODE39 barcode (text + null terminator)

> ⚠ Always reset font with `\x1b\x21\x00` and bold with `\x1b\x45\x00` after large/bold sections.

---

3. Discount & Calculation Rules

V1 Discount Types

JikoXpress V1 supports two discount types only. Item-level discounts are planned for V2.

Type	Applied By	Shows On
Order Discount	Waiter (manual, % or fixed amount)	Receipt, Bill
Coupon Code	Customer (at kiosk or ordering platform)	Receipt, Slip

Calculation Order

All totals follow this strict order:

```
Subtotal          = sum of all item prices (full prices)
Order Discount    = percentage or fixed amount off subtotal (if applied)
Coupon Discount   = coupon value off remaining amount (if applied)
                  ──────────────────────────────────────
Discounted Total  = Subtotal - Order Discount - Coupon Discount
VAT (18%)         = 18% of Discounted Total   ← VAT always after discounts
                  ──────────────────────────────────────
TOTAL             = Discounted Total + VAT
```

Coupon Validation

Coupons are validated **at the kiosk** before the slip is printed — not at the counter. This means:

- Customer sees the discounted price before going to counter
- Cashier just collects the amount on the slip — no manual calculation
- Coupon is consumed in the system at validation — no double use
- Slip shows coupon code so cashier can verify if needed

Paid & Change

Paid and Change lines appear **only on cash payment receipts**. For M-Pesa/card the exact amount is charged so no change line is needed.

```
Payment: Cash
Paid:                          TZS 10000
Change:                        TZS   848
```

Display Rules

- Show discount lines **only if a discount was applied** — never show empty discount lines
- Show coupon line **only if a coupon was used**
- Show Paid/Change **only for cash payments**
- VAT is always calculated on the discounted amount

---

4. Receipt — Dine In

When printed: After dine-in customer completes payment. Official proof of purchase.

Contains: Restaurant header, date/time, waiter, table number, items, subtotal, discounts (if any), VAT, total, payment info, ready by time, order number, barcode, thank you, Powered by JikoXpress.

9. Kitchen Ticket — Pack

When printed: When a pickup or delivery order is placed.

Border style: `*` — high attention, signals food must be packaged.

Two variants:

- **Pickup** — no customer name, no courier
- **Delivery** — customer first name + courier name

Preview — Pickup

11. Payment Slip — Kiosk Cash

When printed: When a kiosk customer chooses to pay cash at the counter.

This is NOT an order yet. Only after cashier confirms payment does the system create a real order and send to kitchen.

Coupon: Validated at kiosk before slip prints. Discounted total already reflected on slip — cashier just collects the amount shown.

Expiry: Configurable by admin. Default: 15 minutes from slip creation.

12. Full Print Flow

Dine In Flow

```
Customer sits → Waiter opens order, assigns table
       ↓
Waiter takes order
       ↓
Print: Kitchen Ticket (DINE IN, ROUND 1) → Chef cooks
       ↓
Customer orders more?
       ↓
Print: Kitchen Ticket (DINE IN, ROUND 2) → new items only
       ↓
Repeat for additional rounds...
       ↓
Customer asks for bill
```

```
       ↓
Waiter applies discount? (optional)
       ↓
Print: Bill (all rounds + discount if any, TOTAL DUE, not a receipt)
       ↓
Customer pays (cash or mobile money)
       ↓
Print: Receipt — Dine In (with discount if any, paid+change if cash)
```

Pickup Flow

```
Order placed (POS / App / WhatsApp)
Customer applies coupon? → validated instantly
       ↓
Print: Kitchen Ticket (PACK — no names) → Chef prepares & packages
       ↓
Customer arrives, pays
       ↓
Print: Receipt — Pickup (customer full name, coupon if used, paid+change if cash)
```

Delivery Flow

```
Order placed (App / WhatsApp)
Customer applies coupon? → validated instantly
       ↓
Digital Full Payment Receipt sent to customer (WhatsApp/SMS)
includes: delivery fee, address, payment ref, courier name, discounts
       ↓
Print: Kitchen Ticket (PACK — customer first name + courier name)
→ Chef prepares & packages
       ↓
Print: Kitchen Receipt → placed inside package
includes: food items, discounts, total, customer first name, courier name, ready by
       ↓
Courier collects and delivers
```

Kiosk Cash Flow

```
Customer orders on kiosk
Customer enters coupon code? → validated instantly at kiosk
       ↓
Print: Payment Slip (SLIP-0045, discounted total if coupon, expiry time)
       ↓
Customer walks to counter with slip
       ↓
Cashier scans barcode → confirms payment → collects exact amount on slip
       ↓
System converts slip → Order JKX-00123
       ↓
Print: Kitchen Ticket (PACK) → Chef cooks
       ↓
Print: Receipt → Customer gets proof of payment
```

Cancellation Flow

```
Order or round cancelled in JikoXpress system
       ↓
Print: Cancellation Ticket → immediately to kitchen printer
       ↓
Chef stops preparation, discards matching kitchen ticket
```

---

13. Name Display Rules

Document	Dine In	Pickup	Delivery
Receipt	Table number only	Full name	Full name + Courier full name
Kitchen Receipt	—	—	First name + Courier first name
Bill	Table number only	—	—
Kitchen Ticket	No name	First name only	First name + Courier first name
Payment Slip			

> **Rule:** Kitchen never sees full names or personal details. First name is enough for kitchen coordination. Full names only on official customer-facing documents.

---

14. Java / Spring Boot Integration

Printer Name

```
private static final String PRINTER_NAME = "MHT-P80H-Printer";
```

Print Method

```
public void print(String escposContent) throws Exception {
    ProcessBuilder pb = new ProcessBuilder("lp", "-d", PRINTER_NAME, "-o", "raw", "-");
    pb.redirectErrorStream(true);
    Process process = pb.start();
    process.getOutputStream().write(escposContent.getBytes(StandardCharsets.ISO_8859_1));
    process.getOutputStream().close();
    process.waitFor();
}
```

> ⚠ Use `ISO_8859_1` encoding, not UTF-8.

Discount Calculation (Java)

```
public OrderTotals calculate(Order order) {
    BigDecimal subtotal = order.getItems().stream()
        .map(i -> i.getPrice().multiply(BigDecimal.valueOf(i.getQty())))
        .reduce(BigDecimal.ZERO, BigDecimal::add);

    BigDecimal orderDiscount = order.getOrderDiscount() != null
        ? subtotal.multiply(order.getOrderDiscount()).divide(BigDecimal.valueOf(100))
        : BigDecimal.ZERO;
```

```
    BigDecimal couponDiscount = order.getCouponDiscount() != null
        ? order.getCouponDiscount()
        : BigDecimal.ZERO;

    BigDecimal discountedTotal = subtotal
        .subtract(orderDiscount)
        .subtract(couponDiscount);

    BigDecimal vat = discountedTotal
        .multiply(BigDecimal.valueOf(18))
        .divide(BigDecimal.valueOf(100), 0, RoundingMode.HALF_UP);

    BigDecimal total = discountedTotal.add(vat);

    return new OrderTotals(subtotal, orderDiscount, couponDiscount, vat, total);
}
```

Key Rules

1. Always reset font after large/bold: `\x1b\x21\x00` and `\x1b\x45\x00`
2. Notes must be uppercased: `note.toUpperCase()`
3. Ready By = order timestamp + admin-configured prep time
4. Barcode = order number without dashes e.g. `JKX00123`
5. Slip barcode = slip number without dashes e.g. `SLIP0045`
6. VAT always calculated after all discounts
7. Show discount lines only if discount was applied — never show empty lines
8. Show Paid/Change only for cash payments
9. Show coupon line only if coupon was used
10. Always end with `\n\n\n\x1d\x56\x00`
11. Delivery fee never on any printed document — digital only
12. Kitchen tickets never show prices or discounts

Ethernet Printing (Future — LAN)

```
public void printOverEthernet(String escposContent, String printerIp) throws Exception {
    try (Socket socket = new Socket(printerIp, 9100);
         OutputStream out = socket.getOutputStream()) {
        out.write(escposContent.getBytes(StandardCharsets.ISO_8859_1));
        out.flush();
    }
```

```
}
```

> Set printer IP via DHCP reservation. Port 9100 is the standard raw print port for ESC/POS over network.
